

BagPak 3000-BB (Bulk Bag and Box Filler– Spout Top, Scale System)

Constructed of HEAVY-DUTY structural steel, a stainless steel, two-piece fill spout, and integrated load cells, the BagPak 3000 bulk bag filler offers dust free filling of spout top SuperSacks, Gaylord boxes with formed or loose liners, and drums. The integrated scale and controls, allow bulk and dribble container filling, with a slide gate, rotary valve, or any device of your choice. An expandable rubber boot seals the SuperSack to the BagPak filling system for a dust tight connection through out the entire fill. Other features include individually adjustable receiver arms and fill head that allow quick changes for variable bag sizes. Additionally the fill head liner ring allows “spouting” box liners, which eliminates bounce-out of material.

OPTIONS

- Bag inflation (inflates SuperSack™ prior to filling)
- Cartridge Filter System
- Service Air Control (provides control of extremely dusty products)
- All stainless steel construction
- Densification (gyrated bed for product settling)
- On-Pallet Drum Filling
- Sample Port
