

## GH 1000 (Gyrated Hopper)

Constructed of HEAVY-DUTY structural steel tubing and supports, industrial grade gyrator, and isolated hopper bottom, our Gyrated Hopper is useful for difficult to handle powders and solids. When used in conjunction with an inverter for IBC's, drums, Gaylord boxes (or any other container) the gyrated hopper will promote flow and metering of products that otherwise bridge, rathole, or agglomerate.

### OPTIONS

- Outlet Feeder or Conveyor (Unit below shown with de-lumper and vacuum pick-up pan)
- Relief Cone
- Fork Pockets on Base
- Piercing Device
- Iris Valve
- Access Door
- Casters & Jacks
