

BagPak 2100-SS (Bulk Bag Filler– Spout Top, Scale System)

Constructed of a HEAVY-DUTY structural steel frame, a stainless steel two piece fill spout, and integrated floor scale, the BagPak 2100-SS bulk bag filler offers dust free filling to weight of spout top SuperSacks™ up to 4,400lbs. With the floor scale and controls a bulk bag can be filled in bulk and dribble mode, utilizing the slide gate valve, to achieve desired weight. Utilizing an air expanded bladder the bag spout is sealed during the fill cycle. By connecting the fill head dust port to factory dust collection (or to a dust sock) the entire fill cycle becomes a dust free operation. Other features include individually adjustable bag strap receiver arms and fill head that allow quick change for variable bag sizes, and fork pockets for easy mobility.

OPTIONS

- Bag inflation (inflates SuperSack™ prior to filling)
- Cartridge Filter System
- Service Air Control (allows for greater cfm control while using plant dust collection)
- All stainless steel construction
- Densification (gyrated bed for settling of product)
