

BagFlo 500-RK (Bulk Bag Unloader Retrofit Kit)

Our retrofit kit allows you to utilize an existing frame but add the proven effectiveness in unloading SuperSacks™ of non-free flowing materials via the gyrating hopper. This kit is constructed of heavy-duty structural steel framework and comes complete with mounting plates, cross supports, isolators, gyrator and mount, and receiver hopper. Simply provide us with the inside dimensions of your current frame (must be at least 3" square tubing, ¼" wall) and we'll supply the unit to fit.

OPTIONS

- Outlet Feeder or Conveyor (Flex Screw, Pneumatic, etc.)
- Piercing Device
- Iris Valve
- Access Door
